

## **Working Prototype Known Problems Report**

**CMPS 115 – Software Methodology**

**Smart Irrigation Front End**

**November 27, 2015**

### **Functions Currently Not Working:**

- Incomplete login controller; doesn't allow for versatile actions after authentication, only authenticates and moves the user to the next page.
- Bootstrap to Database incomplete; The users are hardcoded into the server bootstrap sequence, and doesn't rely on outside configuration.
- Incomplete Logout Controller; doesn't clear out old user details or current user details after logout, but the user is technically logged out. This is tied to the incomplete login controller.
- Range on graphs incomplete; no buttons for changing ranges on graphs, only a static 4-month window.
- Active water usage feature scrapped because of backend team's change of scope.
- Next watering time scrapped because of back-end's change of scope.
