

Smart Irrigation Frontend

User Documentation

No set up is required to use the web application.

The user will be visiting **smart-irrigation.no-ip.info** and will be brought to a login page where they must input their assigned credentials. New users may not sign up on their own because users would have been assigned credentials when communication between their garden [sensors] and the web application was set up.

Once signed in, the user will be brought to a page containing weather information for the location where their garden is set up. The page also allows the user to see moisture and temperature sensor data on line charts by clicking one of two buttons (**Summary box**). When a button is clicked, a pop up window appears displaying the graph. To exit this pop up window, the user can click on the x located at the top right corner of the pop up window.

The user can log out using the logout button above the weather forecast module.
